

UNIQUE MESSAGE ORDER FORM

Every application is different, so you will need to tell us what messages work for you and your organisation. You will also need to decide how many S.O.S transmitters you will need. Up to a total of 6, 7, or 8, "S.O.S. Assist" zone messages can be triggered. You can have up to 6 x Assist zone messages when your system includes "Lockdown" and "EVAC Drill", up to 7 x "S.O.S. Assist" zone messages when the system includes "Lockdown" and no "EVAC Drill", and up to 8 x "S.O.S. Assist" zone messages when the system has no "Lockdown" and no "EVAC Drill". In addition to this you can have multiple transmitters within any or all of the zones.

EVAC - MESSAGE

An evacuation activation will output the Australian Standard evacuation tones (complying to AS1670.4)

In compliance with Australian Standards for evacuation tones, a unique voice message may be played after every third siren tone cycle providing evacuation instructions to occupants.

e.g. *"please evacuate the building by the closest exit and assemble at the designated assembly point"*

Please enter your evacuation message: (Please Print Clearly)

EVAC DRILL – MESSAGE (This feature is only available on PA system versions of AARC-EVAC)

This function can be set up to emulate the systems standard evacuation alert (Sirens & Message) all being preceded by a warning that it is a drill.

E.g. "This is a drill...Warning this is a drill" 3 x Australian Standard Evacuation Tones (then Evac message) e.g. "please evacuate the building by the closest exit and assemble at the designated assembly point" 3 x Australian Standard Evacuation Tones "This is a drill...Warning this is a drill" 3 x Australian Standard Evacuation Tones etc. etc.

Please enter your "Drill Warning" message:

Please enter your "Evacuation" message:
